

READING LIST DESIGN

Learning Bytes

June 2017

**Reading List
Best
Practice**

**Think about the
structure of your
reading list**

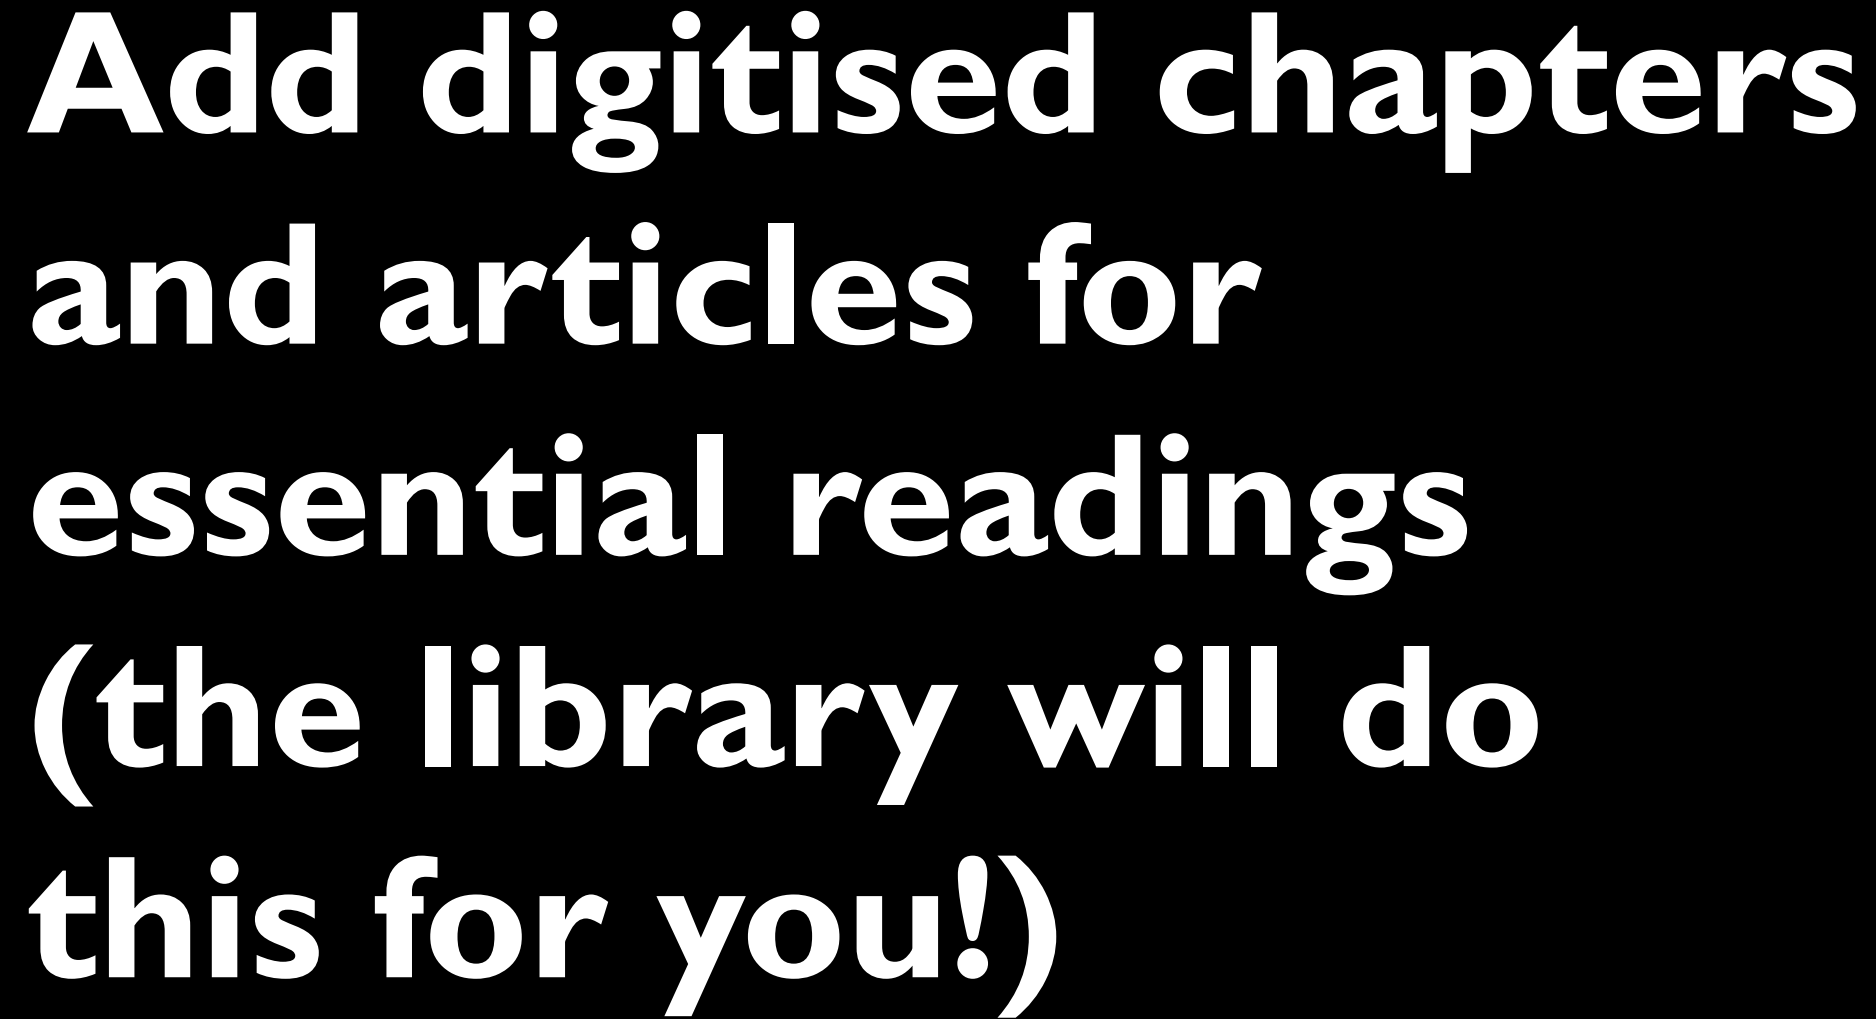

**Add different
types of
resources**

**Add annotations to
items**

**Don't make everything
recommended reading**

**Add digitised chapters
and articles for
essential readings
(the library will do
this for you!)**

Embedding MyReading in your teaching....

**Embed links to
reading list items
in UniLearn,
lecture slides etc**

**Promote
reading lists
to students**

**Use annotations to
link reading lists
items to teaching
activities**

Your Design A Reading List Challenge:

- Envelopes for each group contain items for a research methods module reading list. You have various suggested readings plus ideas to help with structure.
- Create a reading list using these items. You don't have to use all the items, think about what makes a good reading list.
- Remember to add headings, annotations, and other elements that will make a good reading list.

**What have you
learnt about
designing a good
reading list?**
